

Muhammad Zaeem

Islamabad, Pakistan | (+92) 303-9775115 | muhammadzaeem520@gmail.com | [LinkedIn](#)

Full-Stack .Net Developer | .Net Core, Angular, Blazor, Docker, Sql Server, Syncfusion, Telerik, Radzen, Microservices, Postgres, RabbitMQ, SignalR

Education

BSc in Software Engineering, Software Development Major

COMSATS University Islamabad (Campus Lahore), Sep 2021

Coursework: Data Structures, OOP, Programming Fundamentals, Machine Learning

Experience

Software Engineer | Business Analytics Pvt Ltd (Onsite, Islamabad)

Jun 2022 – Present

Project: FATWA

Software Developer

- Built responsive sites with Blazor (Telerik, Radzen, Syncfusion), CSS, and HTML.
- Designed and implemented RESTful APIs using .NET Core.
- Implemented user management using ASP.NET Identity.
- Designed and integrated system workflows to streamline business processes, ensuring smooth automation and efficient task execution.
- Served as module lead for the Bug Reporting Module, enabling efficient tracking, prioritization, and resolution of system issues.
- Designed and implemented features for the Organizing Committee Module, enabling seamless event planning and management within the system.
- Managed version control and collaboration using Git, handling branching, merging, and pull requests while deploying applications on local servers for continuous integration and delivery.
- Built web application frontends using Telerik components, demonstrating strong expertise in Blazor framework concepts and best practices.
- Engineered frontend logic to process Excel workbooks, enabling users to upload, parse, and validate actuarial data for integration into rating algorithms.
- Implemented PDF generation modules to produce detailed, customizable reports (e.g., risk summaries, company scorecards) using libraries such as PDF Format Provider, RadFixedDocument, PDF Export Setting, and MemoryStream to ensure compliance with industry standards.
- Debugged and resolved frontend and backend issues, performing thorough testing, fixing bugs, and optimizing code for performance, security, and user experience.

Project: Document Management System (DMS)

Senior Software Developer

- Implemented a microservices architecture with **RabbitMQ** for asynchronous inter-service communication.
- Utilized **PostgreSQL** with advanced indexing, query optimization, and JSONB storage for handling large-scale document metadata.

- Integrated and customized **.NET Blazor** libraries such as **SfPdfViewerServer**, **SfSpreadsheet**, **SfDocumentEditorContainer**, and **SfImageEditor** to support document viewing, conversion, annotation, and secure rendering in the browser.
- Implemented **AES encryption** (**AES-256**, CBC mode, PKCS7 padding) with Base64-encoded keys and IVs for secure document storage, ensuring confidentiality and compliance with security standards.
- Developed scalable **.NET Core APIs** for document upload, retrieval, and version control, leveraging **Entity Framework Core** for database operations.
- Built background processing services for heavy file operations (conversion, compression, thumbnail generation) using asynchronous I/O to avoid blocking API performance.
- Configured **RabbitMQ** exchanges, queues, and routing keys to support distributed workflows such as indexing, audit logging, and document lifecycle management.
- Applied **Clean Architecture** principles and dependency injection to maintain modular, testable, and maintainable code.

Personal Projects

- **Clippable** (.Net Core) – 2025
- **Radzen Grid Pagination Library (Blazor)** – 2025
- **A.M. Best** (Blazor Frontend) – 2024
- **E2 Value** (.Net WebForms) – 2024
- **Inspect Connect** (.Net Core + Angular) – 2024
- **Medicine Authenticator**(Flutter) – 2021

Technical Skills

- | | | | |
|-------------|--------------|------------|----------|
| • .Net Core | • Radzen | • RabbitMQ | • GitHub |
| • Angular | • Syncfusion | • SignalR | • Jira |
| • Blazor | • REST | • MySQL | |
| • Telerik | • C# | • Docker | |

Languages

- Urdu – Native
- English – Advanced
